

550 Planetary Grinder, 22.5"

- Designed & Built in USA -

FEATURES:

- Extremely versatile, powerful multi concrete grinder-polisher with high capacity - from deep grinding & coatings removal to polishing
- A little larger than the base 460 Avenger with an impressive 7.5 HP motor for even greater capacity and performance.
- Excellent choice for its size as an effective concrete polisher, coarse grinding, coatings removal, preparation and maintenance
- Like the 460, the Avenger 550 is built internally as a 3 Phase Machine complete as follows: **True Planetary Counter Rotating Transmission** with variable speed forward and reverse, individual diamond heads (3) that spin in unison along with a counter-rotating drum - all of which are steel gear driven - **No unreliable drive belts to replace!**
- Induction Motor + Three Phase Frequency & Control provides a very durable, high performing, smooth operating machine.
- Use 240V Single-Phase or 120 Volt Power - when 240 volt power is not accessible the included Voltage Converter allows you to combine two 120V circuits to one 240V circuit!
- **Equipped with Instant Change Magnetic Plates that also accepts Husqvarna & M6 metals, and 3" Velcro Plates for using resins and semi-metals.**
- Optional interlocking 68 lb. Horseshoe weight plates (3).

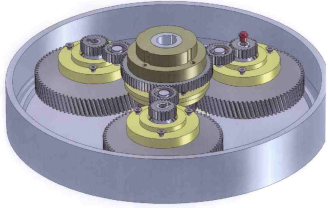

\$8,995.00

Specifications		Average Production Rates Per Day (May vary due to job conditions, tooling, operator, etc.)	
Motor Output	7.5 HP Induction 10,000 Hour Motor	Marble:	800 – 1075 ft ²
Required Circuit	120 / 240 Volt Single Phase, 30 Amp	Terrazzo:	1500 – 2000 ft ²
Approx Weight	450 lbs + three (3) 68 lb plates available	Granite:	430 – 540 ft ²
RPM Speed	300-1250 Variable Speed	Concrete:	2500 – 3500ft ²
Water Tank	6.6 gal (25 liters)	Glue Removal:	1075 – 2150 ft ²
Grinding Disc Diameter	8-5/8" (3) Magnetic Counter Rotating Plates w/ velcro attachments	Paint Removal:	1600 – 3770 ft ²

DETAILED FEATURE INFORMATION:

Exclusive All Gear Design - No Drive Belts. Built very much like the transmission in a car with steel gears driving each grinding head (3) and a counter rotating drum (gears spin in unison, gear box spins counter clockwise), for a **True Planetary Rotating Transmission.** The HD, solid gear driven design provides the highest production rate with less operator fatigue, a noticeable improvement in producing a Quality Finished Product and longer diamond life — while being extremely durable, reliable and even easier to maintain.

Magnetic Instant-Change Tool Mounting & USA Made Diamonds!

All diamond tooling is secured with strong earth magnets, from the individual trapezoid metals to 3" semi-metal and resin polishing pads (velcro adaptors included.) A screwdriver is used to pry the diamonds from the magnetic base. No more wasting time dealing with bent or seized screws, even when switching from metals to resins! **BONUS: the same magnetic plate also accepts Husqvarna & M6 diamonds!**

American Made Motor - 3-Phase Controller & Ingenuity!

Powerful, Durable & Intelligently Designed – in all Avengers.

Robust, Sturdy 3-Phase Induction Motor Performance –

Induction motors have less parts: No carbon brushes, slip rings, capacitors, winding or commutators - motor rating is 10,000 hour vs. 500 hour for a single phase.

Forward & Reverse on the Grinding Heads – Expect to remove the toughest and thickest epoxy, paint, mastic or rubber and grind the deepest and fastest.

Variable Speed – Grind rough floors by *slowing down* the grinding speed, this will keep the diamonds from bouncing; increase the RPM's when polishing with resin tools. Variable speed optimizes your diamond tooling life AND provides “adjustments” for each job's unique conditions.

Maximum Cooling - Heat sinks, located in the rear of the machines, are *exposed* to open air to efficiently allow temperatures to dissipate quickly — competitive machines have their heat sinks sealed in a cabinet . . .

MINIMAL & EASY MAINTENANCE: With an induction 3-phase motor having less parts and the Avengers having *NO* complex electronics or drive belts to replace, **Avengers are built to last decades following this simple maintenance schedule:** Drain the gear box after the first 500 hours, thereafter every 1000 hours — Done. No other maintenance required.

Best Built Floor Machine in America – Backed by Levetec's 2-Year "Bump-to-Bumper." The solid design of every Avenger is backed by a **2-Year, Full "Bumper-to-Bumper" Warranty.** With **FREE** lifetime technical support or to answer job specific questions, we are here for our customers. And if you feel the need to get really technical and in-depth, the designer of the Avengers is here too.

Metal Diamond Tools - To grind concrete floors you use metal tooling to grind through the cap to renew or prepare the substrate for coating, sealing or polishing.

< [Click here to see the Diamond Tool Price List](#) >

Resin Diamond Tools - To bring a floor to a high shine it is necessary to use resin diamond tooling to polish the substrate to the look you seek.
